# The todonotes package\*

# Henrik Skov Midtiby henrikmidtiby@gmail.com

January 5, 2024

#### Abstract

The todonotes package allows you to insert to—do items in your document. At any point in the document a list of all the inserted to—do items can be listed with the \listoftodos command.

<sup>\*</sup>This document corresponds to to donotes v1.1.7, dated 2024/01/05.

#### 1 Introduction

The todonotes package makes four commands available to the user: \todo[]{}, \missingfigure{} and \listoftodos. \todo[]{} and \missingfigure{} makes it possible to insert notes in your document about things that has to be done later (todonotes ...). The \todostyle command allows the user to define named custom styles as abbreviations for lists of other options that can be given to the \todo command. I developed the basic functionality of the package while I worked on my bachelor project.

Some alternatives for the todonotes package are:

• easy-todo

Depends on color, tocloft and ifthen, small feature set.

fixmetodonotes

Depends on graphicx, color, transparent, watermark, fix-cm, ulem and tocloft, small feature set.

todo

Depends on amssymb, medium feature set.

• fixme

Large package with a lot of features.

The main reason for considering other packages is that the todonotes package is quite large and relies heavily on tikz. This can slow down compilation of large documents significantly. The mentioned alternatives have a different feature set and does not rely on tikz, which makes them require fewer resources.

#### 1.1 Usage

\todo My most common usage of the todonotes package, is to insert an todonotes somewhere in a latex document. An example of this usage is the command

\todo{Make a cake \ldots},

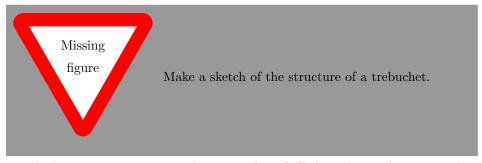

Make a cake ...

which renders like. The \todo command has this structure:  $\todo [\langle options \rangle] \{\langle todo text \rangle\}$ . The todo text is the text that will be shown in the todonote and in the list of todos. The optional argument options, allows the user to customize the appearance of the inserted todonotes. For a description of all the options see section 1.3.

\missingfigure

The \missingfigure command inserts an image containing an attention sign and the given text. The command takes only one argument \missingfigure { $\langle text \rangle$ }, a text string that could describe what the figure should consist of. An example of its usage could be

\missingfigure{Make a sketch of the structure of a trebuchet.} which renders like.

\listoftodos

The \listoftodos command inserts a list of all the todos in the current document. \listoftodos takes no arguments. For this document the list of to–do's looks like.

## Todo list

\todototoc

 $\todostyle{\langle name \rangle} {\langle style \rangle}$ 

The \todototoc command adds an entry to the table of contents for list of todos. The command should be placed right before the \listoftodos command.

The \todostyle command defines a new optional argument to the \todo command  $\langle name \rangle$  which sets the options given by  $\langle style \rangle$ . For instance, after issuing

\todostyle{red}{color=red,shadow}

the command \todonote[red]{Stuff} has the same effect as:

\todonote[color=red,shadow]{Stuff}

Defined styles should be used as the first optional argument to \todo, as they reset all predefined options to their defaults.

#### 1.2 Package options

disable If the option disable is passed to the package, the macros usually defined by the package (\todo, \listoftodos and \missingfigure) are defined as macros with no effect, and thus all inserted notes are removed.

obeyDraft, obeyFinal

When the option obeyDraft is given, the package checks if the one of the options draft, draftcls or draftclsnofoot is given (this option is usually given to the document class). If the draft option is given, the functionality of the package is enabled and otherwise the effect of the package is disabled. The option obeyFinal does something similar, except that the todonotes package is only disabled if the final option given.

danish, german, ngerman, croatian

Use translations of the text strings "List of todos" and "Missing figure". The english, french, swedish default is to use none of these options, which results in english text strings. Curspanish, catalan, italian rently the following languages are supported: catalan, croatian, danish, dutch, portuguese, dutch, english, french, german, ngerman, italian, portuguese, spanish and swedish.

Adds a small colored square in front of all items in the Todo list. The color of colorinlistoftodos the square is the same as the fill color of the inserted todonote. This can be useful if there are different types of todos (insert reference, explain in detail, ...) where the color of the inserted todonote marks the type of todo.

color textcolor linecolor

bordercolor

These options sets the default colors for the todo command. There are four colbackgroundcolor ors that can be specified. The border color (default bordercolor=black) around

4

the inserted text, the color behind the inserted text (default backgroundcolor=orange), the color of the inserted text (default textcolor=black) and the color of the line connecting the inserted textbox with the current location in the text (default linecolor=orange). Setting the color option to val passes this value on to the background and line color options. The specified colors must be valid according to the xcolor package.

tickmarkheight

tickmarkheight=length set the height of the tickmark at the location where the todo is inserted, the default value is Opt.

textwidth

textwidth=length sets the width of a todo item in the margin to length. The width of inline todonotes defaults to the width of the current \linewidth but can be adjusted using the inlinewidth option.

textsize

textsize=value sets the default text size of the inserted todonotes to the given value. Value is the "name" of the used font size, eg. if the desired fontsize is \tiny use textsize=tiny. The default value is textsize=normalsize.

prependcaption

The prependcaption option triggers a special behaviour of the caption=val option for the todo command, where the given value val is inserted in the inserted todonote.

loadshadowlibrary

If given, the shadows tikz library will be loaded. This is required for adding shadows to the inserted todonotes.

shadow

If the shadow option is given, the inserted todonotes will by default be displayed with a gray shadow. For this to work, the package option loadshadowlibrary must be provided. I expect that the option will trigger problems with tikz versions

dvistyle

When a document with todonotes is compiled with plain latex (to a dvi-file), there is an issue with the visual appearance<sup>1</sup>. The option dvistyle changes the appearance of the inserted todonotes to avoid this problem.

figwidth

The figwidth=length option sets the default width of the figure inserted by the \missingfigure command. The default value is \linewidth.

#### 1.3 Options for the todo command

There are several options that can be given to the \todo command. All the options are described here and often I have included examples of the change in visual appearance. Default values for these options can be set using the setuptodonotes command.

\setuptodonotes{fancyline, color=blue!30}

disable

The disable option can be given directly to the todo command. If given the command has no effect.

color bordercolor

And a green note

These options set the color that is used in the current todo command. The backgroundcolor color classes is the same as used in the color package options, see section 1.2. textcolor Default values can be set by the color options when the todonotes package is linecolor loaded. The todo notes inserted in this paragraph is created with the command \todo[color=green!40]{And a green note}. The color of the inserted note could be used to mark different types of tasks (insert references, explain something in detail, ...), this could be streamlined by defining new commands like below.

\newcommand{\insertref}[1]{\todo[color=green!40]{#1}}

<sup>&</sup>lt;sup>1</sup>The problem is placement of text inside the colored boxes.

Anything but default colors An example that uses all of the color options is given below.

\todo[linecolor=green!70!white, backgroundcolor=blue!20!white, bordercolor=red, textcolor=yellow]{Anything but default colors}.

shadow / noshadow

If the package is loaded with the shadow option, a shadow is added to all notes, otherwise no shadows are shown. This global setting can be overwritten by the shadow and noshadow options to the todo command. To insert a note with and without shadows, use the shadow and noshadow options as shown here:

A note without a shadow
A note with a shadow

Test of option.

\todo[shadow]{A note with a shadow}
\todo[noshadow]{A note without a shadow}

tickmarkheight

tickmarkheight=length set the height of the tickmark at the location where the todo is inserted. An example of the option in use is shown here.

\todo[tickmarkheight=0.1cm]{Test of option.}

line / noline

If you want to get rid of the line connecting the inserted note with the place in the text where the note occurs in the latex code, the option noline can be used. \todo[noline]{A note with no line ...}

A note with no line connecting it to the placement in the original text.

inline / noinline

It is possible to place a todonote inside the text instead of placing it in the margin, this could be desirable if the text in the note has a considerable length. \todo[inline]{A todonote placed in the text}

#### A todonote placed in the text

Another usage for the inline option is when you want to add a todonote to a figure caption.

\begin{wrapfigure}{r}[20mm]{40mm}
\begin{tikzpicture}
\draw[red] (0, 0) circle(0.45);
\draw[green] (1, 0) circle(0.45);
\draw[blue] (2, 0) circle(0.45);
\end{tikzpicture}
\caption{A text explaining the image.
\todo[inline]{Fill those circles \ldots}}
\end{wrapfigure}

Figure 1: A text explaining the image.

Fill those circles ...

size

 ${\tt size=val}$  changes the size of the text inside the todo note. The commands used to create the notes below are

\todo[size=\Large]{A note with a large font size.} and \todo[inline, size=\tiny]{Note with very small font size.}.

Note with very small font size.

list / nolist

A note with a

large font size.

When the option nolist is given, the todo item will not appear in the list of

caption

A very long and tedious note that cannot be on one line in the list of todos.

todos.

The caption option enables the user to specify a short description of the todonote that are inserted in the list of todos instead of the full todonote text.

\todo[caption={Short note}]{A very long and tedious note that cannot be on one line in the list of todos. }.

prepend / noprepend

Short note with prepend: A very long and tedious note that cannot be on one line in the list of to-

A very long and tedious note that cannot be on one line in the list of todos.

fancyline

Testing.

Xavier

author

Testing author option.

The effect of this option is altered with the package option prependcaption or the prepend / noprepend option for the todo command.

The options prepend and noprepend can be used for setting whether a given caption should be prepended to the todonote or not. Globally this can be set using the prependcaption option for the package. Below is the effect of the option shown using the code:

\todo[prepend, caption={Short note with prepend}]{A very long and tedious note that cannot be on one line in the list of todos. }. \todo[noprepend, caption={Short note with noprepend}]{A very long and tedious note that cannot be on one line in the list of todos.}.

The fancyline option inserts a curved arrow, pointing from the inserted note to the insertion point. The option is used like this:

\todo[fancyline]{Testing.}

The author option takes a parameter, the name of the author. The given name is inserted in the todonote.

Xavier: Testing author option.

\todo[author=Xavier]{Testing author option.} \todo[author=Xavier, inline]{Testing author option.}

inlinewidth

The inlinewidth option makes it possible to alter the width of inline todos.

Testing the option inlinewidth.

\todo[inline, inlinewidth=5cm]{Testing the option inlinewidth.}

inlinepar / noinlinepar

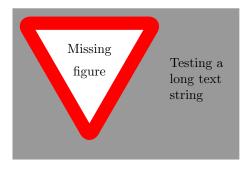

The options inlinepar and noinlinepar (default) determine whether the inserted inline todonote is sorrounded with par macros that enforce new lines Testing the option inlinepar. prior to and after inserted inline todonotes. This is a line after the inserted todonote.

\todo[inline, inlinewidth=5cm, noinlinepar]{Testing the option inlinepar.}

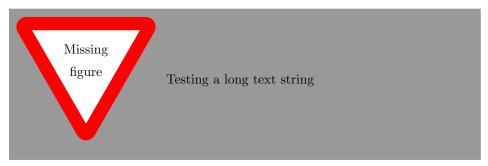

#### 1.4 Options for the missingfigure command

figwidth The figwidth=length option sets the width of the figure inserted by the \missingfigure command. Length values below 6cm might trigger some problems with the visual appearance. Try to compare the default of the missing figure command, when the option is given or not.

\missingfigure[figwidth=6cm]{Testing a long text string}

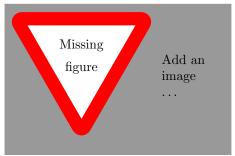

\missingfigure{Testing a long text string}

Another usage of the option is when \missingfigure is used in the wrapfigure environment.

\begin{wrapfigure}[1]{r}[2cm]{6cm}
\missingfigure[figwidth=6cm]{Add an image \ldots}
\end{wrapfigure}

The figheight=length option changes the height of the inserted missing figure. The default height is 4cm and using values lower than this might cause the warning sign to pop out of the gray area.

\missingfigure[figheight=6cm]{Testing a long text string}

figcolor The figcolor=color options sets the background color of inserted missing figures. The default color is black!40.

\missingfigure[figcolor=white]{Testing figcolor}

### 1.5 Options for the listoftodos command

The  $\$ listoftodos command takes one optional argument, that defines the name of the inserted list of todos.

\listoftodos[I can be called anything]

#### 1.6 Known issues

#### 1.6.1 Package loading order

The todonotes package requires the following packages.

ullet ifthen ullet tikz

• xkeyval

graphicx (is loaded via the tikzxcolorpackage)

When to donotes are loaded in the preamble, the package checks if these packages all are loaded. If that is not the case it loads the missing packages with no options given. If you want to give some specific options to some of these packages, you have to load them *before* the to donotes package, otherwise you will get an "Option clash" error when latex works on the document.

If both the menukeys and the xcolor (with the option table) package should be loaded, the following order must be used.

```
\usepackage[table]{xcolor}
\usepackage{todonotes}
\usepackage{menukeys}
```

The following packages must be loaded before the todonotes package:

• polyglossia

#### 1.6.2 Wrapping of long lines in list of todos

When a document is compiled with latex (and not pdflatex) long items in the list of todos are not wrapped into several lines, and do instead continue to the right out of the page.

#### 1.6.3 Conflicts with the amsart documentclass

The amsart document class redefines some internal commands that is used by the todonotes package, this will cause an malfunctioning \listoftodos command. The following code to circumvent the problem was given by Dan Luecking on comp.text.tex

```
\makeatletter
  \providecommand\@dotsep{5}
\makeatother
\listoftodos\relax
```

#### NOT TESTED NOT TESTED NOT TESTED

Dominique suggests the following workaround.

```
\makeatletter
\providecommand\@dotsep{5}
\def\listtodoname{List of Todos}
\def\listoftodos{\@starttoc{tdo}\listtodoname}
\makeatother
```

#### 1.6.4 Unknown option "remember picture"

If latex throws the error

Package tikz Error: I do not know what to do with the option "remember picture".

It probably means that your latex installation is outdated, as only newer versions of latex driver for tikz supports the remember picture option. For additional info consult "Section 9.2.2 Producing PDF Output" in the tikz manual. http://www.ctan.org/tex-archive/graphics/pgf/base/doc/generic/pgf/pgfmanual.pdf

#### 1.6.5 Todonotes wrongly placed in the margin

When using some document classes or packages, the todonotes inserted in the page margin can be placed quite oddly. This is often caused by a wrong value of the \marginparwidth lenght. Try using the code below in your preamble to see if this cures the problem.

\setlength{\marginparwidth}{2cm}

If the todonotes are inserted in the wrong margin, the solution is the \reversemarginpar command. When this command is issued the following marginpars (which todonotes relies on) is inserted in the other margin.

#### 1.6.6 Reduce number of warnings

If the width of the inserted todonotes is forced to be larger than the available space in the margin, a lot of warnings are issued. This can be reduced with the following code.

```
\usepackage[textwidth=3.7cm]{todonotes}
\setlength{\marginparwidth}{3.7cm}
```

#### 1.6.7 Todonotes in footnotes

Placing todonotes in footnotes throws a lot of errors. However inline notes seems to work fine, as shown here <sup>2</sup>:

```
\footnote{Note \todo[inline]{description}}
```

Richard Stanton comes with the following work around.

\renewcommand{\marginpar}{\marginnote}

#### 1.6.8 Trouble with classicthesis.sty

Problem description on tex.stackexchange.com.

Solution by Stefan Kottwitz. The problem is caused by the redefinition of \marginpar in classicthesis.sty. \marginpar is used by todonotes. It can be fixed by restoring the original meaning, if you don't need the classicthesis marginpar style. Just add this to your document preamble: \let\marginpar\oldmarginpar

<sup>&</sup>lt;sup>2</sup>Note description

#### 1.6.9 Todos in math and floating environments

It is not possible to insert todonotes into math environments or floating environments like figure or table. By replacing the marginpar command with a marginnote this can be enabled. For todos inside math environments the todo must be placed in an mbox or \textrm command.

```
\documentclass{article}
\usepackage{todonotes}
\usepackage{marginnote}
\let\marginpar\marginnote

\begin{document}
\begin{equation}
a^2=b^2+c^2 \textrm{\todo{Test}}
\end{equation}
\begin{figure}
\centering
\caption{Caption\todo{tests}.}
\label{fig}
\end{figure}
```

#### 1.6.10 Conflict between marginpar and the standalone class

The standalone document class is not compatible with the \marginpar command, which is used in the todonotes package to insert contents in the side margins. A workaround is to replace the \marginpar with \marginnote. This is demonstrated here:

```
\documentclass[crop=false]{standalone}
\usepackage{todonotes}
\usepackage{marginnote}
\let\marginpar\marginnote
\begin{document}
Lorem ipsum
\todo{Bug}
\end{document}
```

#### 1.6.11 Issues with user-defined styles

Using an option defined using \todostyle will reset all predefined options to their defaults. For instance, \todo[inline,newstyle]{Stuff} will not be inline; however \todo[newstyle,inline]{Stuff} will be.

\todostyle does not check if the name of the defined style is already one of the defined options, so, e.g., \todostyle{inline}{color=red} will redefine the inline option to produce red marginal notes.

#### 1.7 Things to improve

This is a list of things I consider to improve sometime in the future. It have not been done yet as I lack the time or skills to implement them. Patches with

implementations of these tasks will be appreciated and might be included in the package if it will improve the package quality.

#### 1.7.1 Owner information

Option for the todo command.

```
\todo[owner={Fabrice}]{Stuff}
```

Add info on who "owns" the current todo. Idea: Fabrice Niessen

#### 1.7.2 Due date

Option for the todo command.

```
\todo[due=2008-12-07]{Stuff}
```

Add info on when the current todo is due. Might be enhanced by a time line of the todos that have a due date assigned. Idea: Fabrice Niessen

#### 1.7.3 Mark accomplished todos

\todo[done]{Stuff}

Idea: Fabrice Niessen

#### 1.8 Usage methods

In this section I have collected some different methods to use the todonotes package.

#### 1.8.1 Define new commands with fixed options

Often there is a need for marking different classes of things to do (add reference, rewrite, ...). One way to do this, is to define some new commands as shown below (idea from Florent B.).

```
\newcommand{\addref}{\todo[color=red!40]{Add reference.}}
\newcommand{\rewrite}[1]{\todo[color=green!40]{#1}}
```

To distinguish between the different types of todos, the todonotes package can be loaded with the colorinlistoftodos option, which adds small colored squares to the list of todos.

\usepackage[colorinlistoftodos]{todonotes}

#### 1.8.2 Define new commands with arbitrary default options

If you do not like the default values of the standard todo command, it is possible to define a new command with the similar functionality of \todo with custom default values.

```
\newcommand{\todoredefined}[2][]
{\todo[color=red, #1]{#2}}
```

Test of newly defined command The new command can now be used like shown below

```
\todoredefined{Test of newly defined command.}
\todoredefined[color=green]{Test of newly defined command, requesting a green color.}
```

Test of newly defined command, requesting a green color. This can be done with all the accepted options for the **\todo** command.

If only available options to the \todo command are desired in the defined command, a similar effect can be achieved by defining a new style. For instance,

```
\todostyle{red}{color=red}
\todo[red,inline]{A red to do}
```

will produce a note like this:

A todo with user-defined style red

#### 1.8.3 Enumerate todonotes

If the inserted todonotes should be enumerated, it is possible to define a new command with the desired behaviour.

```
\newcounter{todocounter}
\newcommand{\todonum}[2][]
{\stepcounter{todocounter}\todo[#1]{\thetodocounter: #2}}
```

1: A numbered todonote.

2: Another numbered todonote.

The idea is to define a new counter todocounter, and insert the value of the counter in each todonote. The new command can be used like

```
\todonum{A numbered todonote.}
\todonum{Another numbered todonote.}
```

#### 1.8.4 Comments "a la Word"

Fabrice Niessen sent me the following use case. The idea is to define a new command \mycomment which adds a counter and optionally the initials of the author to the inserted todonote.

```
\newcounter{mycomment}
\newcommand{\mycomment}[2][]{%
    % initials of the author (optional) + note in the margin
    \refstepcounter{mycomment}%
    {%
        \setstretch{0.7}% spacing
        \todo[color={red!100!green!33},size=\small]{%
        \textbf{Comment [\uppercase{#1}\themycomment]:}~#2}%
}}
```

Comment [HSM1]: Testing first time.

Comment [HSM2]: Testing second time.

The command \mycomment[HSM]{Testing first time.} is displayed like shown in the left margin, and another call of the command is added below \mycomment[HSM]{Testing second time.}.

#### 1.8.5 Combination with the fixme package

Thomas Arildsen has mailed me this use case. Check the documentation for the fixme package, as the code below relies directly on it (the \FDUser command is augmented when \begin{document} is reached).

```
\usepackage[user,nomargin]{fixme}
\usepackage{todonotes}
\newcommand{\FXUser}[2]{\todo[inline,size=\small]{{\bfseries #1:} #2}}
```

#### 1.8.6 Altering the line spacing of todonotes

The setspace package lets you alter the line spacing of smaller sections of your document. The primary construct is the spacing environment, which is demonstrated below.

```
\begin{spacing}{0.5}
Some lines with a decreased line spacing. This is accomplished
using the setspace package that is included in standard latex
distributions.
\end{spacing}
```

Some lines with a decreased line spacing. This is accomplished using the setspace package that is included in standard latex distributions.

Using the spacing environment we can define a new todonote command using the code below:

```
\newcommand{\smalltodo}[2][]
    {\todo[caption={#2}, #1]
    {\begin{spacing}{0.5}#2\end{spacing}}}
```

Some lines with a decreased line spacing. This is accomplished using the setspace package that is included in standard latex distributions.

Todonotes with decreased line spacing can now be inserted as follows

```
\smalltodo[size=\footnotesize]{
Some lines with a decreased line spacing. This is accomplished using the setspace package that is included in standard latex distributions.}
```

A different approach is given by Vitaly.

```
\newcommand{\tinytodo}[2][]
{\todo[caption={#2}, size=\small, #1]{\renewcommand{\baselinestretch}{0.5}\selectfont#2\par}]
```

Some lines with a decreased line spacing. This is accomplished without using any special packages.

It looks like seen here.

```
\tinytodo{
Some lines with a decreased line spacing. This is accomplished
without using any special packages.}
```

#### 1.8.7 Marking new / old sections

Sometimes a whole section has to be marked by some means. You might want to try the following.

```
\todo[inline, caption={Some text}]{
\begin{minipage}{\linewidth}
Some text that might differ from the text given to the caption option.
\end{minipage}
}
```

It is important to add the caption={text} option, otherwise latex will try to embed a minipage in the table of contents which triggers an error. Inside the minipage environment almost anything could be placed, except for other todo commands.

To streamline use the following command was suggested by Stefan Pinnow.

This example renders like

```
\todoin{
Some text.
\begin{align}
\sin(\theta)^2 + \cos(\theta)^2 = 1
\end{align}
A formula and a list
\begin{itemize}
\item An item
\end{itemize}
}
```

```
Some text. \sin(\theta)^2 + \cos(\theta)^2 = 1 \tag{1} A formula and a list 
 • An item
```

#### 1.8.8 Link to list of todos

Using the hyperref package it is possible to add a link from the inserted todonotes to the list of todos. The example were supplied by Andreas Plank.

```
% Define a counter for the inserted todonotes.
\newcounter{todoListItems}
\newcommand{\todoTrans}[2][]{
    % Increment counter
    \addtocounter{todoListItems}{1}
    \todo[%
```

```
caption={\protect\hypertarget{todo\thetodoListItems}{}Translation},
  #1]
{
  #2 \hfill
  \hyperlink{todo\thetodoListItems}{$\uparrow$}
}
}
```

The idea behind the code is to embed a hypertarget in each entry in the list of todos. In the todonotes a link to the entry in the list of todos is inserted as an arrow that points upwards. Using the \todoTrans command like below, the following two notes have been inserted.

\todoTrans{papirsflyver}
\todoTrans[inline]{damplokomotiv}

papirsflyver

damplokomotiv

1.8.9 Numbered todonotes

The inserted todonotes can be argumented with the current subsubsection number. The code is shown below.

1.8.9. A numbered todo.

By changing \thesubsubsection to \thesection, the current section number can be inserted instead of the subsubsection number. The result looks like. Which were generated by the code

\ntodo{A subsection numbered todo.}.

#### 1.8.10 Combining several modifications

Manduca have combined several of the modifications above into a highly specialized todo command. She uses the code:

Small notes with links back to the list of todos.

Smart notes with links back to the list of todos.

```
\newcounter{todoListItems}
\newcommand{\sstodo}[2][]
{\addtocounter{todoListItems}{1}
\todo[caption={\protect\hypertarget{todo\thetodoListItems}{}\thesection. #2}, #1]
{\begin{spacing}{1} \hfill \hyperlink{todo\thetodoListItems}{#2} \end{spacing} }}
```

Using this approach it is possible to customize the behavior of the inserted notes to a very high degree.

#### 1.8.11 Alter the appearance of the list of todos

Marco Daniel gives the following example of how to add section numbers to the elements in the list of todos. The code is slightly modified from <a href="http://tex.stackexchange.com/questions/18838/replacing-page-number-with-other-counter-in-listofted">http://tex.stackexchange.com/questions/18838/replacing-page-number-with-other-counter-in-listofted</a> An example of the modified list of todos is shown below, the complete code example is given in the example directory.

#### 1.8.12 Tikz externalization issues

Using the tikz externalization framework together with todonotes can lead to some problems. One solution is to disable the externalization just before the todo command is issued and then reactivate externalization afterwards. The ruggedtodo handles this deactivation and reactivation.

```
\usetikzlibrary{external}
\tikzexternalize
\newcommand{\ruggedtodo}[2][]{\tikzexternaldisable\todo[#1]{#2}\tikzexternalenable}
```

#### 1.8.13 Highligt text to fix

Tobias Winchen provides the following example on how to highlight text related to the inserted todonote. Example wrong text continues here. Notice that the code relies on the soul package.

```
\makeatletter
\if@todonotes@disabled
\newcommand{\hlfix}[2]{#1}
\else
\newcommand{\hlfix}[2]{\texthl{#1}\todo{#2}}
\fi
\makeatother
Example \hlfix{wrong text}{fix text}~continues here.
```

#### 1.8.14 Adding color coded levels of todos

Sometimes it can be beneficial to be able to distinguish between different types of todos. For this I would suggest the following approach:

```
\newcommand{\todoerror}[2][]{\todo[color=red!70, #1]{#2}}
\newcommand{\todowarn}[2][]{\todo[color=orange, #1]{#2}}
\newcommand{\todoremark}[2][]{\todo[color=yellow!80!black, #1]{#2}}
\newcommand{\todohint}[2][]{\todo[color=green!20, #1]{#2}}
\newcommand{\tododone}[2][]{\todo[color=blue!50, #1]{#2}}
\todoerror[inline]{Testing}
\todowarn[inline]{Testing}
\todohint{Testing}
```

fix text

\tododone[disable] {Testing}

Testing

Testing

Testing Testing

## 1.8.15 Notes in both left and right margin

If you want to add many todonotes in your document, it can be beneficial to use both the left and right margins for the inserted notes. This can be achieved by defining a helper function the following way. The main drawback is that notes inserted using the marginnote command does not float and thus they can get to overlap. This idea was suggested by FranzAtGithub.

```
\usepackage{marginnote}
\usepackage{etoolbox}
\newtoggle{lmargin}
\verb|\iftoggle{lmargin}||%
   {%
       \todo[#1]{#2}
       \togglefalse{lmargin}
   }{%
       {%
           \let\marginpar\marginnote%
           \reversemarginpar%
           \todo[#1]{#2}%
       }%
       \toggletrue{lmargin}%
   }%
}%
```

## 2 Implementation

```
Identifies the package and loads the packages dependences.
```

```
1 \ProvidesPackage{todonotes} [2024/01/05]
 2 \RequirePackage{ifthen}
 3 \RequirePackage{xkeyval}
 4 \RequirePackage{xcolor}
 5 \RequirePackage{tikz}
 6 \usetikzlibrary{positioning}
 7 \RequirePackage{calc}
Implement a function for setting up the todonotes package.
 8 \newcommand\setuptodonotes[1]{\presetkeys{todonotes}{#1}{}}
Some default values are set
 9 \newcommand{\@todonotes@text}{}%
10 \newcommand{\@todonotes@backgroundcolor}{orange}
11 \newcommand{\@todonotes@textcolor}{black}
12 \newcommand{\@todonotes@linecolor}{orange}
13 \newcommand{\@todonotes@bordercolor}{black}
14 \newcommand{\@todonotes@tickmarkheight}{unused value}
15 \newcommand{\@todonotes@textwidth}{\marginparwidth}
16 \newcommand{\@todonotes@textsize}{\normalsize}
17 \newcommand{\@todonotes@figwidth}{\linewidth}
18 \newcommand{\@todonotes@figheight}{4cm}
19 \newcommand{\@todonotes@figcolor}{black!40}
20 \AtBeginDocument{
21 \ifx\undefined\phantomsection
22 \newcommand{\phantomsection}{}
23 \fi
24 \ifdim \marginparwidth < 2cm
25 \PackageWarning{todonotes}{The length marginparwidth is
26 less than 2cm and will most likely cause issues with the
27 appearance of inserted todonotes.
28 The issue can be solved by adding a line like
29 \setlength{\marginparwidth}{2cm}
30 prior to loading the todonotes package.} \else\fi%
31 }
```

#### 2.1 Declaration of options for the package

In this part the various options for the package are defined.

Define the default text strings and set localization options for the danish and german languages.

```
